6.0 Uniquiz for Desktop Apps

6.1 Available in two desktop versions.

- 1. A comprehensive version (Desktop-Dual) which allows you to do revision, create and distribute answer sets. This mode is recommended for student who would like to revise the content and teachers who want to create tests from the already available questions.
- 2. The second version is a limited version which is used for taking test only. This version is recommended for testing centers because the student has no option to look at the syllabus content. This version can only load and open question sets.

Both desktop versions use the published database. When you visit the website to download the distribution files, these three components are clearly distinguished.

- The most current published database
- UniquizDesktopApp_Dual
- UniquizDesktopApp_Test

6.2 Settings

When you start the application, the login splash screen exposes the links to the settings. It is important that you het the settings right before the application can correctly run. In case you are not sure of the settings, please contact the distribution agent or your systems administrator.

Important settings

1. Db Link

As already noted, the database containing the questions is published separately. When you download the database, you can place it in any directory on your computer. Most likely a directory which you can access. Do not place the database ad part of the system files. Db link tells the app which database you are reading. You can have as many databases as possible. In the example below, I have placed mu databases in one folder on my C drive (C:\UniquizDatabases)

📕 🖂 📜 👻 UniquizDatabases												
File Home Share View												
← → ✓ ↑ 🖡 C:\UniquizDatabases												
	^	Name	Date modified	Туре	Size

OneDrive		QuizFlashCards_OnLine20210401145929	6/27/2021 12:58 AM	Data Base File	48,176 KB							
19 Documentation												

To link app to the database file

- Click on the LINKDB button
- Locate the file
- Select the file and accept (Open) the selection

Start Page	NK DB			_		×				
🧃 Quiz F	lash Cards									
	📲 Open					-				\times
	$\leftarrow \rightarrow \checkmark \uparrow$	📕 C:\Uniqui	izDatabases		~	U	🔎 Search Uni	quizDat	abases

	IDATA (D:)									
	🕩 Network			~	• <					>
		File name:	QuizFlashCards_OnLine	-1.0		~	All files (*.*) Open	(Cancel	~

When you successfully link app to the database, it will show as the data source at various places.

2. Machine Identity

The desktop app uses a license. The license is obtained from the vendor and given to you as a file. You will be directed where to drop the file by the distributor. For purposes of this document, the file is normally placed as part of the system files where the app is installed.

To generate a license for you, you must submit the machine identity. When you open the login screen, it will reveal your machine identity (see login screen)

3. Exploring your settings

The SETTINGS button allows you to explore your settings. It can also be used to link the database and other administrative tasks. Do not change settings if you are not sure of the item you are exploring.

📲 System Se	ettings	- 🗆 X
Database	File	Refresh Form
C:\Uniquiz		
		Update DB File
Data Packag Serial Numb	Je er:	Create Package
Crypto Pro	operty Update	
Property	Show Proper	ty Update Value
Property Value	FlxSourceDbConnection FlxDestinationDbConnection FlexibleXUserId EncryptedMachineIdentity	
Messages		

- The Refresh button will reveal the database and load the list of items you can view
- You can use the "Update DB File" button to change the questions database
- Any changes that affect your Crypto license package may result into malfunctioning of the system if not properly done.

6.3 Adding your user - Candidate

Once you successfully connect to a database, you can now add your credentials. Your class or group and your ID. Your credentials will depend on the system admin or established ways of doing things. There is no standard.

If you enter a Class and ID which are not in the database you are linking to, a screen demanding that you create them will show up. You can as well use the "New User" button to create your credentials.

Cloud Registered Users

If you want to keep track of your performance, you can apply for a cloud account where you can keep results of your tests, participate in contests, and win awards and scholarships. For details about this arrangement, contact: marketing@flexiblex.com, flexdatapin@gmail.com, sbfsystems@gmail.com.

If you are registered in such arrangements, you will be given specific groups and Ids that are registered.

Usually, the testing center that manages your tests and progress will advise or issue you with a card containing these credentials.

Task based Ids

You can be given credentials that are spontaneous or temporary for purposes of completing a task such that the person who allocated the task, would want to use those very credentials to check your task. For example, the app can be used for interview purpose. An interview group can be created, and you can be allocated a code to use as your ID.

Multiple IDs

You can use multiple IDs if you are not under any institutional arrangement. For example, if you have a personal copy of the app and you want to beat the restrictions on the number of attempts on a test (An Id is allowed up to only 6 attempts on a question set)

6.4 Revision Mode

• Questions are organized by **Country**, **Level**, **Class**, **Subject**, **Syllabus** in that order. One category leads to the other. You must select all of them.

🐮 Unic	Uniquiz - [Syllabus Content]

	PIS-P6-JER020					I			Extract Question Set				
	PIS-P6-JER021	$\mathbf{\vee}$											

The revision mode assumes that you are not interested in challenging yourself but rather checking your knowledge retention.

Each answer is displayed with an explanation. The questions and answers are supplied as they are. You cannot change or edit them.

6.5 Setting a test (Question set)

The questions are already grouped by syllabus. However, you may want a few questions from the same syllabus of a set of questions from different syllabi. You can only combine questions from the syllabi of the same class. Do not mix grades or levels in the same question set.

- Step 1: Name your question set. You can use codes or familiar notation to distinguish these sets.
 For example, lets create a question set P6TEST001TERM1. Put the code in the Question set box.
- Step 2: Click or select a question. Once the question is selected, use "Add to Question Set" button to add the selected question to the answer set.
- Step 3: Repeat the second step for each question you want to be added to the set. You can even change the syllabus.

	PIS-P6-JER016								Extract Question Set		
	PIS-P6-JER017								Upload Question Set		
	PIS-P6-JER018										

- Step4: Extract your test using the "Extract Question Set" button. The reason you want to extract the test is for purposes of distribution.
- Step 5: Store question set files in organized directories.
 - Questions sets (tests) will be extracted into a folder. This method allows you upload as many tests as possible from the same folder.
 - \circ $\;$ You can keep tests for each term or each section in a separate folder.

6.5 Testing Mode

The test mode is designed for taking tests under supervision. This mode is suitable for testing centers. If you are using the dual mode or the revision mode, the same functions that we are going to discuss are also available with just a few differences.

Loading Question sets

• We will begin by loading the question set we created in the previous section.

- Locate and select the folder containing the question set files
- All files in the folder will be loaded into the connected database
- Make sure questions that are in the test exist in the database you are connecting to. In other words, use the same published database as the setter.

Navigation – Question set Vs Answer set

- Just like the revision mode, content is arranged by **country**, **level**, **class**, **subject**, **and syllabus** or Test. The testing mode does not display syllabus data.
- In addition to the above, question set data will not display until the candidate creates their own answer set. This is done this way because:
 - You cannot directly answer from the source. You create and answer from an answer set
 - You may want to make several **attempts**. Therefore, you need the original copy intact. The revision mode allows you to create several attempts. The test mode may not allow more than one attempt
- After selecting the **country**, **level**, **class**, **subject**, **and test code**, select an attempt Id and then click the "Create Answer Set" button. Your new answer set will be shown in the list.

COUNTRY LEVEL CLASS SUBJECT SYLLABUS (TEST CODE) UGANDA PRIMARY PRIMARY-SIX SCIENCE P6TEST001TERM1	~
COUNTRY LEVEL CLASS SUBJECT SYLLABUS (TEST CODE)	~

Answering Questions

Once an answer set is created, you can select it from the dropdown list and the questions will be displayed. The left-hand side panel allows you to navigate to a question by clicking on it or tabbing into the cell for the question number. You can use both the keyboard and mouse to navigate.

- Answers are displayed as options A, B, C, D and sometimes E. The box containing these letters is active and when you click on it, it will assume that is the answer you have chosen. A black and bold frame will be made around your selection.
- You can change your answers by selecting another letter box.
- There are buttons for selecting answers as well, but they generally tend to refresh the whole page and you must again select the question to confirm the change or selection.
- When a question is answered, it will be identified with a black background and a white text.

COUNTRY	LEVEL		LASS SUBJECT SYLLABUS		SYLLABUS

► PIS-P6-0009	•	QN	PIS-P6-0009	1								
PIS-P6-0038		Question	Why is the left ventr	Why is the left ventricle wall thicker than the right ventricle wall?								
PIS-P6-0039 PIS-P6-0044		A	To prevent the muscle of the heart from bursting due to high pressure of oxygenated blood from the lungs.									
		В	To enable stronger muscular contraction that provides force needed to raise blood pressure to enable blood flow at a higher velocity to parts of the body that are far e.g. legs.									
		c	To provide more space for blood storage in the heart.									
D			For easy identification of the left ventricle and right ventricle of the heart.									

Marking your script

- Once you have answered the questions (usually all will display with black background). Try to go through them all to ensure they are answered.
- Click the "Mark Script" Button
- The label for the button will change to display a percentage of questions answered correctly by count.

Once you mark your script, you cannot change the answers. The system will instantly give you feedback by indicating the questions you got right with green and those you got wrong with red.

6.6 User Cloud Account

Your crypto license comes with a connection to a cloud-based database. This connection allows you to access storage services for your marks.

Users with cloud accounts use them as their login Id when opening the system. They can have different groups (which may indicate testing center number or otherwise). Cloud accounts will usually be given to members after a specific subscription or affiliation with a testing center.

The use of a cloud account is to simply store your results. Once the results are stored, then any of the following may be done:

- 1. You can enter competition by answering specific tests that may be taken at a testing center.
- 2. You can have access to an expert to analyze your progress and send you feedback on how to balance your knowledge.
- 3. Build your academic profile for future reference.

Sending your data to your cloud account is not a big task. Once you have marked your script, click the "Send to Uniquiz" button as shown below.

6.7 Desktop App Knowledge Check

- 1. How many versions of the desktop app and what makes them different?
- 2. Why is the database containing questions published separately and how can you obtain it?
- 3. How do you link the database to the app and how do you check whether you have properly linked the two?
- 4. What settings item do you send to the vendor to obtain a license and where do you find it?
- 5. What two items help to identify you as a user?
- 6. What are the key differences between the Revision mode and the Test mode of the desktop App?
- 7. When creating a question set, how would you write a question set ID that you can remember?
- 8. How many question sets can you put under one folder?
- 9. When creating a question set, should you mix questions from various classes and levels?
- 10. When you want to load a question set, do you select the question set file or the folder (directory) containing the file(s)?
- 11. How many attempts can the Test version of the desktop allow you?
- 12. Why would a user need a cloud account?
- 13. How would a user obtain a cloud account?
- 14. What account information am I likely to see if I reveal the details using ACCOUNT INFO button?
